REGULATIONS – 2008

B.E. ELECTRICAL AND ELECTRONICS ENGINEERING

CURRICULUM AND SYLLABI

SEMESTER V

(Applicable to the students admitted from the Academic year 2008 – 2009 onwards)

SL. No.	COURSE CODE	COURSE TITLE	L	T	P	C
THEORY						
1.	EE54	Communication Engineering	3	0	0	3
2.	EC65	Digital Signal Processing	3	1	0	4
3.	CS59	Object Oriented Programming	3	0	0	3
4.	EE51	Power Electronics	3	0	0	3
5.	EE52	Electrical Machines II	3	1	0	4
6.	EE53	Transmission & Distribution	3	1	0	4
PRACTICAL						
1.	CS510	Object Oriented Programming Laboratory	0	0	3	2
2.	HS510	English Language Laboratory - Cumulative Skills - I	0	0	3	2
3.	EE56	Power Electronics Laboratory	0	0	3	2
4.	EE57	Electrical Machines II Laboratory	0	0	3	2

SEMESTER VI

SL. No.	COURSE CODE	COURSE TITLE	L	T	P	C
THEORY						
1.	EE61	Power System Analysis	3	0	0	3
2.	EE62	Solid State Drives	3	0	0	3
3.	EE63	High Voltage Engineering	3	0	0	3
4.	EE64	Microprocessors and Microcontroller	3	1	0	4
5.	EE65	Design of Electrical Machines	3	0	0	3
6.	CS65	Computer Networks	3	1	0	4
7.		Elective I	3	0	0	3
PRACTICAL						
1.	EE66	Microprocessor and Micro controller Laboratory	0	0	3	2
2.	HS610	English Language Laboratory - Cumulative Skills - II	0	0	3	2

SEMESTER VII

SL. No.	COURSE CODE	COURSE TITLE	L	T	P	C
THEORY						
1.	EE71	Power System Operation and Control	3	0	0	3
2.	EE72	Protection & Switchgear	3	0	0	3
3.	EE73	Special Electrical Machines	3	0	0	3
4.	MG75	Principles of Management	3	0	0	3
5.	CS609	Operating Systems	3	0	0	3
6.		Elective – II	3	0	0	3
PRACTICAL						
1.	EE76	Power System Simulation Laboratory	0	0	3	2
2.	EE77	Comprehension	0	0	2	1

SEMESTER VIII

THEORY			L	T	P	C
1.	EE81	Electric Energy Generation, Utilization and Conservation	3	0	0	3
2.		Elective – III	3	0	0	3
3.		Elective – IV	3	0	0	3
PRACTICAL						
1.	EE82	Project	0	0	12	6

LIST OF ELECTIVES - R 2008

ELECTIVE I

SL.NO	CODE NO.	COURSE TITLE	L	T	P	C
1.	EI74	Fibre Optics and Laser Instruments	3	0	0	3
2.	CS610	Visual Programming	3	1	0	4
3.	IC61	Advanced Control System	3	0	0	3
4.	EE603	Robotics & Automation	3	0	0	3
5.	GE606	Professional Ethics & Human Values	3	0	0	3
6.	EE604	Power System Transients	3	0	0	3

ELECTIVE II

7.	EI65	Bio-Medical Instrumentation	3	0	0	3
8.	EE702	Intelligent Control	3	0	0	3
9.	EE703	Power System Dynamics	3	0	0	3
10.	CS608	Computer Architecture	3	1	0	4
11.	GE71	Total Quality Management	3	0	0	3

ELECTIVE III

12.	EE801	Power Quality	3	0	0	3
13.	EE802	System Identification and Adaptive Control	3	0	0	3
14.	EE803	Operations Research	3	0	0	3
15.	EI73	VLSI Design	3	0	0	3
16.	EE805	HVDC Transmission	3	0	0	3

ELECTIVE IV

17.	GE608	Fundamentals of Nano Technology	3	0	0	3
18.	EE806	Micro Electro Mechanical Systems	3	0	0	3
19.	EE807	Software for Circuits Simulation	3	0	0	3
20.	EE808	CAD of Electrical apparatus	3	0	0	3
21.	EE809	Flexible AC Transmission Systems	3	0	0	3

EE54 COMMUNICATION ENGINEERING   **L T P C**
                                                                   3 0 0 3

AIM

To introduce the concepts of communication systems engineering using wire and wireless medium

OBJECTIVES

To introduce different methods of analog communication and their significance
To introduce Digital Communication methods for high bit rate transmission
To introduce the concepts of source and line coding techniques for enhancing rating of transmission of minimizing the errors in transmission.
To introduce MAC used in communication systems for enhancing the number of users.
To introduce various media for digital communication

1. ANALOG COMMUNICATION   9

AM – Frequency spectrum – vector representation – power relations – generation of AM – DSB, DSB/SC, SSB, VSB AM Transmitter & Receiver; FM and PM – frequency spectrum – power relations : NBFM & WBFM, Generation of FM and DM, Amstrong method & Reactance modulations : FM & PM frequency.

2. DIGITAL COMMUNICATION   9

Pulse modulations – concepts of sampling and sampling theormes, PAM, PWM, PPM, PTM, quantization and coding : DCM, DM, slope overload error. ADM, DPCM, OOK systems – ASK, FSK, PSK, BSK, QPSK, QAM, MSK, GMSK, applications of Data communication.

3. SOURCE CODES, LINE CODES & ERROR CONTROL (Qualitative only)   9

Primary communication – entropy, properties, BSC, BEC, source coding : Shaum, Fao, Huffman coding : noiseless coding theorum, BW – SNR trade off codes: NRZ, RZ, AMI, HDBP, ABQ, MBnB codes : Efficiency of transmissions, error control codes and applications: convolutions & block codes.

4. MULTIPLE ACCESS TECHNIQUES   9

SS&MA techniques : FDMA, TDMA, CDMA, SDMA application in wire and wireless communication : Advantages (merits) :

5. SATELLITE, OPTICAL FIBER – POWERLINE, SCADA   9

Orbits : types of satellites : frequency used link establishment, MA techniques used in satellite communication, earth station; aperture actuators used in satellite – Intelsat and Insat: fibers – types: sources, detectors used, digital filters, optical link: power line carrier communications: SCADA

TOTAL : 45 PERIODS

TEXT BOOKS
1. Taub & Schiling "Principles of communication systems" Tata McGraw hill 2007
2. J.Das "Principles of digital communication" New Age International, 1986

REFERENCES
1. Kennedy and Davis "Electronic communication systems" Tata McGraw hill, 4th edition, 1993.
2. Sklar "Digital communication fundamentals and applications" Pearson Education, 2001

EC65 DIGITAL SIGNAL PROCESSING   **L T P C**
                                                             3 1 0 4

AIM
To introduce the concept of analyzing discrete time signals & systems in the time and frequency domain.

OBJECTIVES
- To classify signals and systems & their mathematical representation.
- To analyse the discrete time systems.
- To study various transformation techniques & their computation.
- To study about filters and their design for digital implementation.
- To study about a programmable digital signal processor & quantization effects.

1. INTRODUCTION   9

Classification of systems: Continuous, discrete, linear, causal, stable, dynamic, recursive, time variance; classification of signals: continuous and discrete, energy and power; mathematical representation of signals; spectral density; sampling techniques, quantization, quantization error, Nyquist rate, aliasing effect. Digital signal representation.

2. DISCRETE TIME SYSTEM ANALYSIS   9
Z-transform and its properties, inverse z-transforms; difference equation – Solution by z-transform, application to discrete systems - Stability analysis, frequency response – Convolution – Fourier transform of discrete sequence – Discrete Fourier series.

3. DISCRETE FOURIER TRANSFORM & COMPUTATION   9
DFT properties, magnitude and phase representation - Computation of DFT using FFT algorithm – DIT & DIF - FFT using radix 2 – Butterfly structure.

4. DESIGN OF DIGITAL FILTERS   9
FIR & IIR filter realization – Parallel & cascade forms. FIR design: Windowing Techniques – Need and choice of windows – Linear phase characteristics. IIR design: Analog filter design - Butterworth and Chebyshev approximations; digital design using impulse invariant and bilinear transformation - Warping, prewarping - Frequency transformation.

5. DIGITAL SIGNAL PROCESSORS   9
Introduction – Architecture – Features – Addressing Formats – Functional modes - Introduction to Commercial Processors

                                                                    L T P C
CS59 OBJECT ORIENTED PROGRAMMING   **3 0 0 3**

AIM
To understand the concepts of object-oriented programming and master OOP using C++ and Java.

Unit I   7
Object oriented programming concepts – objects-classes- methods and messages-abstraction and encapsulation-inheritance- abstract classes- polymorphism.Introduction to C++- objects-classes-constructors and destructors

Unit II   12
Operator overloading - friend functions- type conversions- templates - Inheritance – virtual functions- runtime polymorphism.

Unit III   **8**
Exception handling - Streams and formatted I/O – file handling – namespaces – String Objects - standard template library.

Unit IV   **8**
Introduction to JAVA , bytecode, virtual machines – objects – classes – Javadoc – packages – Arrays - Strings

Unit V   **10**
Inheritance – interfaces and inner classes - exception handling – threads - Streams and I/O

TOTAL : 45 PERIODS

EE51 POWER ELECTRONICS   **3 0 0 3**

AIM

Learning how to apply the electronic devices for conversion, control and conditioning of electronic power.

OBJECTIVES
- To get an overview of different types of power semi-conductor devices and their switching characteristics.
- To understand the operation, characteristics and performance parameters of controlled rectifiers.
- To study the operation, switching techniques and basic topologics of DC-DC switching regulators.
- To learn the different modulation techniques of pulse width modulated inverters and to understand the harmonic reduction methods.
- To study the operation of AC voltage controller and Matrix converters.
- To study simple applications

1. **POWER SEMI-CONDUCTOR DEVICES**   **9**
   Study of switching devices, - Frame, Driver and snubber circuit of SCR, TRIAC, BJT, IGBT, MOSFET,- Turn-on and turn-off characteristics, switching losses, Commutation circuits for SCR,

2. **PHASE-CONTROLLED CONVERTERS**   **9**
   2-pulse, 3-pulse and 6-pulse converters – Effect of source inductance – performance parameters – Reactive power control of cnverters – Dual converters - Battery charger.

3. **DC TO DC CONVERTER**   **9**
   Step-down and step-up chopper - Time ratio control and current limit control – Buck, boost, buck-boost converter, concept of Resonant switching - SMPS.

4. **INVERTERS**   **9**
   Single phase and three phase (both 120^0 mode and 180^0 mode) inverters - PWM techniques: Sinusoidal PWM, modified sinusoidal PWM - multiple PWM – Introduction to space vector modulations - Voltage and harmonic control - Series resonant inverter - Current source inverter.

5. **AC TO AC CONVERTERS**   **9**
   Single phase AC voltage controllers – Multistage sequence control - single and three phase cycloconverters –Introduction to Integral cycle control, Power factor control and Matrix converters.

EE52 ELECTRICAL MACHINES - II   **3 1 0 4**

AIM
    To expose the students to the concepts of synchronous and asynchronous machines and analyze their performance.

OBJECTIVES
    To impart knowledge on
i.   Construction and performance of salient and non – salient type synchronous generators.

ii.   Principle of operation and performance of synchronous motor.

iii.   Construction, principle of operation and performance of induction machines.
iv.   Starting and speed control of three-phase induction motors.
v.   Construction, principle of operation and performance of single phase induction motors and special machines.

1.   **SYNCHRONOUS GENERATOR**   **9**
Constructional details – Types of rotors – emf equation – Synchronous reactance – Armature reaction – Voltage regulation – EMF, MMF, ZPF and A.S.A methods – Synchronizing and parallel operation – Synchronizing torque - Change of excitation and mechanical input – Two reaction theory – Determination of direct and quadrature axis synchronous reactance using slip test – Operating characteristics - Capability curves.

2.   **SYNCHRONOUS MOTOR**   **8**
Principle of operation – Torque equation – Operation on infinite bus bars - V-curves – Power input and power developed equations – Starting methods – Current loci for constant power input, constant excitation and constant power developed.

3.   **THREE PHASE INDUCTION MOTOR**   **12**
Constructional details – Types of rotors – Principle of operation – Slip – Equivalent circuit – Slip-torque characteristics - Condition for maximum torque – Losses and efficiency – Load test - No load and blocked rotor tests - Circle diagram – Separation of no load losses – Double cage rotors – Induction generator – Synchronous induction motor.

4.   **STARTING AND SPEED CONTROL OF THREE PHASE INDUCTION MOTOR 7**
Need for starting – Types of starters – Rotor resistance, Autotransformer and Star-delta starters – Speed control – Change of voltage, torque, number of poles and slip – Cascaded connection – Slip power recovery scheme.

5.   **SINGLE PHASE INDUCTION MOTORS AND SPECIAL MACHINES**   **9**
Constructional details of single phase induction motor – Double revolving field theory and operation – Equivalent circuit – No load and blocked rotor test – Performance analysis – Starting methods of single-phase induction motors - Shaded pole induction motor - Linear reluctance motor - Repulsion motor - Hysteresis motor - AC series motor.

EE53   TRANSMISSION AND DISTRIBUTION   **3 1 0 4**

AIM
To understand the importance and the functioning of transmission and distribution of the electric power in an electrical utility (or) a power system.

OBJECTIVES
   i.   To develop expressions for the computation of transmission line parameters.
   ii. To obtain the equivalent circuits for the transmission lines based on distance and operating voltage for determining voltage regulation and efficiency. Also to improve the voltage profile of the transmission system.
   iii. To analyses the voltage distribution in insulator strings and cables and methods to improve the same.
   iv. To understand the operation of the different distribution schemes.

1. INTRODUCTION   **9**
Structure of electric power system - different operating voltages of generation, transmission and distribution – advantage of higher operating voltage for AC transmission.
An introduction to EHV AC transmission, HVDC transmission and FACTs.
Mechanical design of transmission line between towers – sag and tension calculations using approximate equations taking into account the effect of ice and wind.

2. TRANSMISSION LINE PARAMETERS   **9**
Parameters of resistance, inductance and capacitance calculations - single and three phase transmission lines - single and double circuits - solid, stranded and bundled conductors - symmetrical and unsymmetrical spacing – transposition of lines - concepts of GMR and GMD - skin and proximity effects - interference with neighbouring communication circuits.
Corona discharge characteristics – critical voltage and loss.
(Simple diagrams of typical towers and conductors for 400, 220 and 110 kV operations)

3. MODELLING AND PERFORMANCE OF TRANSMISSION LINES   **9**
Transmission line classification - short line, medium line and long line - equivalent circuits – Ferranti effect - surge impedance, attenuation constant and phase constant - voltage regulation and transmission efficiency - real and reactive power flow in lines – power circle diagrams – shunt and series compensation.
An introduction to power angle diagram - surge-impedance loading, loadability limits based on thermal loading; angle and voltage stability considerations.

4. INSULATORS AND CABLES   **9**

Classification of insulators for transmission and distribution purpose – voltage distribution in insulator string and grading - improvement of string efficiency.

Underground cables - constructional features of LT and HT cables – insulation resistance, capacitance, dielectric stress and grading – tan δ and power loss - thermal characteristics.

5. SUBSTATION, GROUNDING SYSTEM AND DISTRIBUTION SYSTEM   9

Classification, functions and major components of substations.

Bus-bar arrangements - substation bus schemes - single bus, double bus with double breaker, double bus with single breaker, main and transfer bus, ring bus, breaker-and-a-half with two main buses, double bus-bar with bypass isolators.

Importance of earthing in a substation. Qualitative treatment to neutral grounding and earthing practises in substations.

Feeders, distributors and service mains. DC distributor – 2-wire and 3-wire, radial and ring main distribution. AC distribution – single phase and three phase 4-wire distribution. .

L T P C
CS510 OBJECT- ORIENTED PROGRAMMING LAB   0 0 3 2

Aim: To develop object-oriented programming skills using C++ and Java

1. Function overloading, default arguments in C++
2. Simple class design in C++, namespaces, objects creations
3. Class design in C++ using dynamic memory allocation, destructor, copy constructor
4. Operator overloading, friend functions
5. Overloading assignment operator, type conversions
6. Inheritance, run-time polymorphism
7. Template design in C++
8. I/O, Throwing and Catching exceptions
9. Program development using STL
10. Simple class designs in Java with Javadoc
11. Designing Packages with Javadoc comments
12. Interfaces and Inheritance in Java
13. Exceptions handling in Java
14. Java I/O
15. Design of multi-threaded programs in Java

REQUIREMENT FOR A BATCH OF 30 STUDENTS

S.No.	Description of Equipment	Quantity required
	Hardware Required	
1.	Computers (Pentium-4)	40 Nos with one server
2.	Dot matrix printer	3 Nos
3.	Laser Printer	2 Nos.
4.	UPS (5 KVA)	2
	Software Required	
5.	Turbo C++	40 Nodes
6.	(Java 2 SDK) JDK 5.0 update 6 (1.5.0 - Internal Version No.)	40 Nos.

HS510   **English Language Laboratory - Cumulative Skills - I**

Fifth Semester

Regulations 2008

(Common to all B.E / B.Tech.)

0 0 3 2

(To be conducted as a Practical Paper by the Department of English for 3 hrs per week)

OBJECTIVES

- To help the learners improve their communicative skill

- To facilitate the learners to improve the pronunciation of words with proper stress

- To help the learners acquire the skills related to Group Discussion and Interview

- To inculcate the habit of reading among the learners

- To equip the learners face the linguistic demands by spotting out errors in sentences
- To improve the active vocabulary of the learners

COURSE CONTENT

A) Interview   **(5 hrs)**

B) Pronunciation - Stress Shift   **(5 hrs)**

C) Group Discussion   **(15hrs)**

D) Reading Comprehension, Error Correction, Vocabulary Target words

   (1500 words)   **(20 hrs)**

RECORD LAY OUT

Every student has to maintain a record in which he / she has to incorporate the following details.

A. Hard copy of the application letter and resume

B. Group Discussion

   Grouping (each group consisting of 10 members)

   Topics* (15 topics – 3 topics to be selected by each group - to be practiced in cycles)

   Pre performance preparation

   Performance

   They have to collect materials related to topics given for Group Discussion

   *__GD Topics__

1. Advertising is a legalized form of lying- Discuss.
2. Impact of the media and internet on modern youth.
3. Communicative competency in English is the golden key for success in the Global arena.
4. Is EQ more important than IQ?
5. Attitude decides one's altitude in life.
6. Should an aspiring student go for a course which is in demand or for a course which he/she likes?
7. Is westernization a cultural degradation or enrichment?
8. Is coalition government sustainable?
9. Should there be a ban on fashion show?
10. No two generations see eye to eye- Discuss.

11. Is scientific advancement a boon or a bane?
12. Should brain drain be banned?
13. Cyber crimes and steps to prevent and control.
14. Is the press in India really free?
15. Does ragging develop friendship?

C. Reading Comprehension – 10 passages

D. Error correction   - 10 sentences for each section

       a. concord
       b. words followed by prepositions (list to be provided)
       c. conjunctions
       d. structure
       e. usage
       f. use of pronouns-antecedent
       g. adverbs placement
       h. particles
       i. use of tenses

E. Use of Vocabulary

10 assignments (each 20 words) using the target words in sentences of their own.

Separate word lists to be allotted to students so that all the words in the target vocabulary are covered

Assignments to be written in the record notebook only after the approval of the Course Teacher

VOCABULARY LIST

The colleges are requested to train the third year B.E./B.Tech. students in the use of following words as part of the syllabus for Cumulative Skill Lab - I and it will be tested for 20 marks during the practical examinations.

(Words from Barron's GRE Test – 'Abase' to 'Dermatologist'- 1500 words – V Semester)

(Words from D+ to Z from Barron's GRE Test will be added in the syllabus for the practical examination in the VI semester)

STRESS SHIFT

MODE OF EVALUATION

INTERNAL ASSESSMENT   **(100 Marks to be converted to 20)**

1. Interview skill   **(10 marks)**

2. Pronunciation skill   **(10 marks)**

3. Group discussion (20 for materials collection and 20 for performance) **(40 marks)**

4. Test in Reading Comprehension and Error Correction   **(40 marks)**

EXTERNAL ASSESSMENT   **(100 Marks to be converted to 80)**

1. Stress shift -10

2. Group discussion -30

3. Vocabulary -20

4. Reading comprehension -30

5. Error correction -10

Part A   (40 minutes for the entire group)

1. Reading Comprehension   (30 marks)

- Two separate passages on scientific/technical themes to be given.
- There will be 5 testing items (either MCQs or T/F or Cloze type) under each text. (5x 2 = 10 testing items each carrying 3 marks)
- 6 such sets will be sent to the respective colleges during the practical.
- Alternate sets to be allotted to students during testing.

2. Error correction   (10 marks)

- 10 items ,covering all the specified areas, will be given
- Sentences will have five segments (A,B,C,D,E) with E necessarily standing for 'NO Error'
- Alternate sets to be allotted to students during testing.

3. Vocabulary Testing **(20 marks)**

- 10 words to be tested
- The most exact synonym to be selected out of the five given alternatives.
- Each item carries 2 marks
- Alternate sets to be allotted to students during testing.

PART B

1. Stress shift **(10 Marks)**

While testing the student's proficiency in the use of stress shift each student should be tested with a different question paper (one out of the 10 sets to be given).

2. Group discussion

The students in the section should be put into a group of 10 each .Before the start of group discussion the group leaders should select the topic at random from the given topics. Marks should be allotted individually according to the following criteria.

A. Relevance of content **(10 Marks)**

B. The use of Language and power of argument **(10 Marks)**

C. Soft skills /social skills **(10 marks)**

NB: The responses for the use of vocabulary, error correction, reading comprehension should be entered in the response coding sheet using black or blue ball point pen .Over writing should be marked wrong.

L T P C
EE56 POWER ELECTRONICS LABORATORY **0 0 3 2**

AIM
To study the characteristics of switching devices and its applications in rectifier inverter, chopper and resonant converter.

List of experiments with objectives and exercises

1.   Characteristics of SCR
2.   Characteristics of TRIAC
3.   Characteristics of MOSFET and IGBT

4.   Transient characteristics of SCR and MOSFET

5.   AC to DC fully controlled converter

6.   AC to DC half-controlled converter

7.   Step down and step up MOSFET based choppers

8.   IGBT based single-phase PWM inverter

9.   IGBT based three-phase PWM inverter

10.   Resonant dc-to-dc converter

TOTAL : 45 PERIODS

REQUIREMENT FOR A BATCH OF 30 STUDENTS

S.No.	Description of Equipment	Quantity required
1.	Device characteristics (for SCR, MOSFET, TRIAC and IGBT) kit with built in power supply & meters	2 each
2.	SCR firing circuit module	2
3.	Single phase SCR based ½ controlled converter & fully controlled converter along with built-in / separate / firing circuit / module and meter	2 each
4.	MOSFET based step up and step down choppers	1 each
5.	IGBT based single phase PWM inverter module	2
6.	IGBT based three phase PWM inverter module	2
7.	IGBT based high switching frequency chopper module with built-in controller	2
8.	Resonant DC-DC conveter module with built in power supply and controller	2
9.	SCR & TRIAC based 1 phase A.C.phase controller along with lamp or rheostat load	4
10.	SCR based V/I commuted chopper module with relevant firing module (separate or built-in)	4
11.	Dual regulated DC power supply with common ground	4
12.	Cathode Ray Oscilloscope	5
13.	Isolation Transformer	5
14.	Single phase Auto transformer	3
15.	Components (Inductance, Capacitance)	3 sets for each

S.No.	Description of Equipment	Quantity required
16.	Multi meter	5
17.	LCR meter	3
18.	Rheostats of various ranges	2 sets of 10 value
19.	Work tables	12
20.	DC and AC metes of required ranges	20

L T P C

EE 57   ELECTRICAL MACHINES II LABORATORY   **0 0 3 2**

AIM

To expose the students to the operation of synchronous machines and induction motors and give them experimental skill.

1. Regulation of three phase alternator by emf and mmf methods.
2. Regulation of three phase alternator by ZPF and ASA methods.
3. Regulation of three phase salient pole alternator by slip test.
4. Measurements of negative sequence and zero sequence impedance of alternators.
5. V and Inverted V curves of Three Phase Synchronous Motor.
6. Load test on three-phase induction motor.
7. Circle Diagram and equivalent circuit of three phase induction motor.
8. Separation of No-load losses of three-phase induction motor.
9. Load test on single-phase induction motor.
10. No load and blocked rotor test on single-phase induction motor.

TOTAL : 45 PERIODS

REQUIREMENT FOR A BATCH OF 30 STUDENTS

S.No.	Description of Equipment	Quantity required
1.	DC shunt motor coupled three phase alternator	2
2.	Synchronous motor coupled to DC motor	1
3.	Three phase induction motors – Squirrel cage Slip ring	2 1
4.	DC Shunt motor coupled salient pole three phase alternator	1
5.	Single phase induction motors	2

6.	Air core inductor to do ZPF	1
7.	Starter- Three phase induction motor starters Single phase induction motor starters	1 1
8.	Meters- Voltmeter (AC) Ammeter (AC) Wattmeter (lpf) Wattmeter (upf)	15 15 15 30
9.	Single phase auto transformer	2
10.	Three phase auto transformer	4
11.	Rheostats of various range	30
12.	DC panel boards (220V, 36V)	1 each
13.	AC panel board	1
14.	Work tables	12

EE61 POWER SYSTEM ANALYSIS   **3 0 0 3**

AIM

To understand the necessity and to become familiar with the modelling of power system and components. And to apply different methods to analyse power system for the purpose of system planning and operation.

OBJECTIVES

ii. To model the power system under steady state operating condition. To apply efficient numerical methods to solve the power flow problem.

iii. To model and analyse the power systems under abnormal (or) fault conditions.

iv. To model and analyse the transient behaviour of power system when it is subjected to a fault.

1. INTRODUCTION   **9**

Modern power system (or) electric energy system - Analysis for system planning and operational studies – basic components of a power system. Generator models - transformer model – transmission system model - load representation. Single line diagram – per phase and per unit representation – change of base. Simple building algorithms for the formation of Y-Bus matrix and Z-Bus matrix.

2. POWER FLOW ANALYSIS   **9**

Importance of power flow analysis in planning and operation of power systems. Statement of power flow problem - classification of buses into P-Q buses, P-V (voltage-controlled) buses and slack bus. Development of Power flow model in complex variables form and polar variables form.

Iterative solution using Gauss-Seidel method including Q-limit check for voltage-controlled buses – algorithm and flow chart.

Iterative solution using Newton-Raphson (N-R) method (polar form) including Q-limit check and bus switching for voltage-controlled buses - Jacobian matrix elements – algorithm and flow chart.

Development of Fast Decoupled Power Flow (FDPF) model and iterative solution – algorithm and flowchart;

Comparison of the three methods.

3. FAULT ANALYSIS – BALANCED FAULTS   9
Importance short circuit (or) for fault analysis - basic assumptions in fault analysis of power systems.

Symmetrical (or) balanced three phase faults – problem formulation – fault analysis using Z-bus matrix – algorithm and flow chart. Computations of short circuit capacity, post fault voltage and currents.

4. FAULT ANALYSIS – UNBALANCED FAULTS   9
Introduction to symmetrical components – sequence impedances – sequence networks – representation of single line to ground, line to line and double line to ground fault conditions.

Unbalanced fault analysis - problem formulation – analysis using Z-bus impedance matrix – (algorithm and flow chart.).

5. STABILITY ANALYSIS   9
Importance of stability analysis in power system planning and operation - classification of power system stability - angle and voltage stability – simple treatment of angle stability into small-signal and large-signal (transient) stability

Single Machine Infinite Bus (SMIB) system: Development of swing equation - equal area criterion - determination of critical clearing angle and time by using modified Euler method and Runge-Kutta second order method. Algorithm and flow chart.

EE62 SOLID STATE DRIVES   3 0 0 3

AIM

To study and understand the operation of electric drives controlled from a power electronic converter and to introduce the design concepts of controllers.

OBJECTIVES

- To understand the stable steady-state operation and transient dynamics of a motor-load system.
- To study and analyze the operation of the converter / chopper fed dc drive and to solve simple problems.
- To study and understand the operation of both classical and modern induction motor drives.
- To understand the differences between synchronous motor drive and induction motor drive and to learn the basics of permanent magnet synchronous motor drives.
- To analyze and design the current and speed controllers for a closed loop solid-state DC motor drive and simulation using a software package

1.   **DRIVE CHARACTERISTICS**   9
Equations governing motor load dynamics - steady state stability - Multi quadrant dynamics - Acceleration, deceleration, starting and stopping - load torque characteristics of various drives.

2.   **CONVERTER / CHOPPER FED DC MOTOR DRIVE**   9
Steady state analysis of the single and three phase fully controlled converter fed separately excited D.C motor drive - Continuous and discontinuous conduction Time ratio and current limit control - 4 quadrant operation of converter.

3.   **DESIGN OF CONTROLLERS FOR DRIVES**   9
Transfer function for DC motor, load and converter – Closed loop control with current and speed feedback - Armature voltage control and field weakening mode control, Design of controllers: Current controller and speed controller - Converter selection and characteristics - Use of simulation software package.

4.   **INDUCTION MOTOR DRIVES**   9
Stator voltage control – energy efficient drive - v/f control, constant air-gap flux – field weakening mode - voltage/current fed inverters - Block diagram of vector control - closed loop control.

5.   **SYNCHRONOUS MOTOR DRIVES**   9
V/f control and self-control of synchronous motor – Marginal angle control and power factor control - Permanent magnet synchronous motor Block diagram of closed loop control.

EE 63   HIGH VOLTAGE ENGINEERING
<div align="right">

L T P C
3 0 0 3

</div>

AIM

To expose the students to various types of over voltage transients in power system and its effect on power system.
- Generation of over voltages in laboratory.
- Testing of power apparatus and system.

OBJECTIVES

i.   To understand the various types of over voltages in power system and protection methods.
ii. Generation of over voltages in laboratories.
iii. Measurement of over voltages.
iv. Nature of Breakdown mechanism in solid, liquid and gaseous dielectrics.
v.   Testing of power apparatus and insulation coordination.

1. OVER VOLTAGES IN ELECTRICAL POWER SYSTEMS   6

Causes of over voltages and its effects on power system – Lightning, switching surges and temporary over voltages – protection against over voltages – Bewley's lattice diagram.

2. ELECTRICAL BREAKDOWN IN GASES, SOLIDS AND LIQUIDS   10

Gaseous breakdown in uniform and non-uniform fields – Corona discharges – Vacuum breakdown – Conduction and breakdown in pure and commercial liquids – Breakdown mechanisms in solid and composite dielectrics.

3. GENERATION OF HIGH VOLTAGES AND HIGH CURRENTS   10

Generation of High DC, AC, impulse voltages and currents. Tripping and control of impulse generators.

4. MEASUREMENT OF HIGH VOLTAGES AND HIGH CURRENTS   10

Measurement of High voltages and High currents – Digital techniques in high voltage measurement.

5. HIGH VOLTAGE TESTING & INSULATION COORDINATION   9

High voltage testing of electrical power apparatus – Power frequency, impulse voltage and DC testing – International and Indian standards – Insulation Coordination.

LT P C
EE64 MICROPROCESSORS AND MICRO CONTROLLER   **3 1 0 4**

AIM
    To introduce Microprocessor Intel 8085 and 8086 and the Micro Controller 8051

OBJECTIVES
    i.   To study the Architecture of 8085 & 8086, 8051
    ii.   To study the addressing modes & instruction set of 8085 & 8051.
    iii.   To introduce the need & use of Interrupt structure 8085 & 8051.
    iv.   To develop skill in simple program writing for 8051 & 8085 and applications
    v.   To introduce commonly used peripheral / interfacing ICs

1.   8085 PROCESSOR   9
Hardware Architecture pintouts - Signals – Memory interfacing – I/O ports and data transfer concepts – Timing Diagram – Interrupt structure. Introduction to 8086 processor (Architecture and modes of operation only).

2.   PROGRAMMING OF 8085 PROCESSOR   9
Instruction format and addressing modes – Assembly language format – Data transfer, data manipulation & control instructions – Programming: Loop structure with counting & Indexing - Look up table - Subroutine instructions - stack.

3.   PERIPHERAL INTERFACING   9
Study of Architecture and programming of ICs: 8255 PPI, 8259 PIC, 8251 USART, 8279 Key board display controller and 8253 Timer/ Counter – Interfacing with 8085 - A/D and D/A converter interfacing.

4.   8051 MICRO CONTROLLER   9
Functional block diagram - Instruction format and addressing modes – Timing Diagram Interrupt structure – Timer –I/O ports – Serial communication.

5.   MICRO CONTROLLER PROGRAMMING & APPLICATIONS   9
Data Transfer, Manipulation, Control & I/O instructions – Simple programming exercises key board and display interface – Closed loop control of servo motor-stepper motor control - Washing Machine Control.

EE65 DESIGN OF ELECTRICAL MACHINES   **3 0 0 3**

AIM

To expose the students to the concept of design of various types of electrical machines.

OBJECTIVES

To provide sound knowledge about constructional details and design of various electrical machines.

i.   To study mmf calculation and thermal rating of various types of electrical machines.
ii.   To design armature and field systems for D.C. machines.
iii.   To design core, yoke, windings and cooling systems of transformers.
iv.   To design stator and rotor of induction machines.
v.   To design stator and rotor of synchronous machines and study their thermal behaviour.

1. INTRODUCTION   **9**
Major considerations in Electrical Machine Design - Electrical Engineering Materials – Space factor – Choice of Specific Electrical and Magnetic loadings - Thermal considerations - Heat flow – Temperature rise - Rating of machines – Standard specifications.

2. DC MACHINES   **9**
Output Equations – Main Dimensions - Magnetic circuit calculations – Carter's Coefficient - Net length of Iron –Real & Apparent flux densities – Selection of number of poles – Design of Armature – Design of commutator and brushes – performance prediction using design values.

3. TRANSFORMERS   **9**
Output Equations – Main Dimensions - KVA output for single and three phase transformers – Window space factor – Overall dimensions – Operating characteristics – Regulation – No load current – Temperature rise in Transformers – Design of Tank - Methods of cooling of Transformers.

4. INDUCTION MOTORS   **9**

Output equation of Induction motor – Main dimensions – Length of air gap- Rules for selecting rotor slots of squirrel cage machines – Design of rotor bars & slots – Design of end rings – Design of wound rotor -– Magnetic leakage calculations – Leakage reactance of polyphase machines- Magnetizing current - Short circuit current – Circle diagram - Operating characteristics.

5. SYNCHRONOUS MACHINES 9

Output equations – choice of loadings – Design of salient pole machines – Short circuit ratio – shape of pole face – Armature design – Armature parameters – Estimation of air gap length – Design of rotor –Design of damper winding – Determination of full load field mmf – Design of field winding – Design of turbo alternators – Rotor design.

EE66   MICROPROCESSOR AND MICRO CONTROLLER LABORATORY   0 0 3 2

AIM
1.   To understand programming using instruction sets of processors.
2.   To study various digital & linear

8-bit Microprocessor

1.   Simple arithmetic operations: Multi precision addition / subtraction / multiplication / division.
2.   Programming with control instructions: Increment / Decrement, Ascending / Descending order, Maximum / Minimum of numbers,Rotate instructions Hex / ASCII / BCD code conversions.
3.   Interface Experiments:
   - A/D Interfacing.
   - D/A Interfacing.
   - Traffic light controller.
4.   Interface Experiments:
   - Simple experiments using 8251, 8279, 8254.

8-bit Microcontroller

5.   Demonstration of basic instructions with 8051 Micro controller execution, including:
   - Conditional jumps, looping
   - Calling subroutines.
   - Stack parameter testing
6.   Parallel port programming with 8051 using port 1 facility:
   - Stepper motor and D / A converter.
7.   Programming exercise on
   - RAM Direct Addressing
   - Bit Addressing
8.   Programming Practice using simulation Tools and C Complier
   - Initialize Timer
   - Enable Interrupts
9.   Study of micro controllerd with FLASH memory.
10.   Programming Practice on Assembler and Simulator tools in 8085.

HS610   English Language Laboratory - Cumulative Skills - II

Semester VI

Regulations 2008

(Common to all B.E. / B.Tech.)

(To be conducted as a Practical Paper by the Department of English for 3 hrs per week)

OBJECTIVES

To equip the learners face the linguistic demands of post-degree entrance examinations

To improve the IV level active vocabulary

To reactivate and reinforce the language functions introduced in earlier papers

To help the learner infer message from non-verbal cues and speak fluently on them

To help the learners inculcate the micro skills of debating on a subject

To motivate the learners read English dailies and react critically to news items

To help the learners acquire the skills related to organization of thoughts while writing articles.

COURSE CONTENT

   A) Target words   **(20 hrs)**

      ((Words D+ to Z from Barron's GRE Test)

   B) Writing articles on media-based themes   **(10 hrs)**

   C) Debate   **(8 hrs)**

   D) Channel conversion (Speaking on Non-Verbal representations)   **(7 hrs)**

RECORD LAY OUT

Every student has to maintain record in which he/she has to incorporate the following details.

Part I: Use of Vocabulary

- 10 assignments (each 20 words) using the target words in sentences of their own.

- Separate word lists to be allotted to students so that all the words in the target vocabulary are covered.

- Assignments to be written in the record notebook only after the approval of the professor in charge.

Part II: Article based on newspaper reading

- One article (**750 words**) based on any theme emerging out of the news items. (According to the methodology suggested)
- It should be written only on the odd pages.
- News items (at least 5) should be collected from English dailies and pasted on the even pages.

Part III: Internal Question Papers on Target Vocabulary Testing & Coding sheets

- Six Question papers to be pasted (2 for synonyms, 2 for antonyms and 2 for sentence completion)
- The corrected coding sheets (6) to be pasted.

The record should be duly signed by the Course Teacher and submitted to the External Examiner for verification during the semester practical.

MODE OF EVALUATION

Internal Assessment (20 marks) (10 marks for the Record and 10 marks for the six tests on Target Vocabulary)
External Assessment (100 marks-to be converted to 80 marks)

The external practical * will consist of two segments (a) Written Test and (b) Testing Speaking

Written Test (1 hr)

a) Testing Target Vocabulary (40 objective type items – 15 synonyms, 15 antonyms and 10 sentence completion) **(40 marks)**
b) Writing articles on the theme emerging from the given newspaper, items given (5 newspaper items based on a single theme will be given) **(20 marks)**

Testing Speaking (3 + 3 minutes)

a) Debate (Each student will be required to speak for three minutes for or against a given topic) **(20 marks)**

b) Speaking on the given diagram / chart / table **(20 marks)**

(*Every learner will be assessed with a different set of question which he / she will choose a random)

L T P C
EE71   POWER SYSTEM OPERATION AND CONTROL   3 0 0 3

AIM: To understand the day to day operation of power system and the control actions to be implemented on the system to meet the minute-to-minute variation of system load demand.

OBJECTIVES:
i.   To have an overview of power system operation and control.
ii.   To model power-frequency dynamics and to design power-frequency controller.
iii.   To model reactive power-voltage interaction and the control actions to be implemented for maintaining the voltage profile against varying system load.

1.   INTRODUCTION   9
System load – variation - load characteristics - load curves and load-duration curve (daily, weekly and annual) - load factor - diversity factor. Importance of load forecasting and simple techniques of forecasting. An overview of power system operation and control and the role of computers in the implementation. (Qualitative treatment with block diagram).

2.   REAL POWER - FREQUENCY CONTROL   9
Basics of speed governing mechanism and modeling - speed-load characteristics – load sharing between two synchronous machines in parallel. Control area concept LFC control of a single-area system. Static and dynamic analysis of uncontrolled and controlled cases. Integration of economic dispatch control with LFC. Two-area system – modeling - static analysis of uncontrolled case - tie line with frequency bias control of two-area system - state variable model.

3.   REACTIVE POWER–VOLTAGE CONTROL   9
Basics of reactive power control. Excitation systems – modeling. Static and dynamic analysis - stability compensation - generation and absorption of reactive power. Relation between voltage, power and reactive power at a node - method of voltage control - tap-changing transformer.
System level control using generator voltage magnitude setting, tap setting of OLTC transformer and MVAR injection of switched capacitors to maintain acceptable voltage profile and to minimize transmission loss.

4.   UNIT COMMITMENT AND ECONOMIC DISPATCH   9
Statement of economic dispatch problem – cost of generation – incremental cost curve - co-ordination equations without loss and with loss, solution by direct method and λ-iteration method. (No derivation of loss coefficients).

Statement of Unit Commitment problem – constraints; spinning reserve, thermal unit constraints, hydro constraints, fuel constraints and other constraints. Solution methods - Priority-list methods - forward dynamic programming approach. Numerical problems only in priority-list method using full-load average production cost.

5. **COMPUTER CONTROL OF POWER SYSTEMS**   **9**

Need of computer control of power systems. Concept of energy control centre (or) load dispatch centre and the functions - system monitoring - data acquisition and control. System hardware configuration – SCADA and EMS functions. Network topology - state estimation - security analysis and control. Various operating states (Normal, alert, emergency, in-extremis and restorative). State transition diagram showing various state transitions and control strategies.

EE72   PROTECTION AND SWITCHGEAR   **3 0 0 3**

AIM: To introduce the students to the various abnormal operating conditions in power system and describe the apparatus and system protection schemes. Also to describe the phenomena of current interruption to study the various switchgears.

OBJECTIVES:
i.   To discuss the causes of abnormal operating conditions (faults, lightning and switching surges) of the apparatus and system.
ii.   To understand the characteristics and functions of relays and protection schemes.
iii.   To understand the problems associated with circuit interruption by a circuit breaker.

1.   **INTRODUCTION**   **9**

Importance of protective schemes for electrical apparatus and power system. Qualitative review of faults and fault currents - relay terminology – definitions - and essential qualities of protection.

Protection against over voltages due to lightning and switching - arcing grounds - Peterson Coil - ground wires - surge absorber and diverters

Power System earthing – neutral Earthing - basic ideas of insulation coordination.

2.   OPERATING PRINCIPLES AND RELAY CHARACTERISTICS   9

Electromagnetic relays – over current, directional and non-directional, distance, negative sequence, differential and under frequency relays – Introduction to static relays.

3.   APPARATUS PROTECTION   9

Main considerations in apparatus protection - transformer, generator and motor protection - protection of busbars. Transmission line protection - zones of protection. CTs and PTs and their applications in protection schemes.

4.   THEORY OF CIRCUIT INTERRUPTION   9

Physics of arc phenomena and arc interruption.

DC and AC circuit breaking - restriking voltage and recovery voltage - rate of rise of recovery voltage - resistance switching - current chopping - interruption of capacitive current.

5.   CIRCUIT BREAKERS   9

Types of circuit breakers – air blast, air break, oil, SF_6 and vacuum circuit breakers – comparative merits of different circuit breakers – testing of circuit breakers.

EE 73   SPECIAL ELECTRICAL MACHINES   3 0 0 3

AIM

To expose the students to the construction, principle of operation and performance of special electrical machines as an extension to the study of basic electrical machines.

OBJECTIVES

To impart knowledge on

i. Construction, principle of operation and performance of synchronous reluctance motors.

ii. Construction, principle of operation, control and performance of stepping motors.

iii. Construction, principle of operation, control and performance of switched reluctance motors.

iv. Construction, principle of operation, control and performance of permanent magnet brushless D.C. motors.

v. Construction, principle of operation and performance of permanent magnet synchronous motors.

1. SYNCHRONOUS RELUCTANCE MOTORS   **9**

Constructional features – Types – Axial and Radial flux motors – Operating principles – Variable Reluctance and Hybrid Motors – SYNREL Motors – Voltage and Torque Equations - Phasor diagram - Characteristics.

2. STEPPING MOTORS   **9**

Constructional features – Principle of operation – Variable reluctance motor – Hybrid motor – Single and multi stack configurations – Torque equations – Modes of excitations – Characteristics – Drive circuits – Microprocessor control of stepping motors – Closed loop control.

3. SWITCHED RELUCTANCE MOTORS   **9**

Constructional features – Rotary and Linear SRMs - Principle of operation – Torque production – Steady state performance prediction- Analytical method -Power Converters and their controllers – Methods of Rotor position sensing – Sensorless operation – Closed loop control of SRM - Characteristics.

4. PERMANENT MAGNET BRUSHLESS D.C. MOTORS   **9**

Permanent Magnet materials – Magnetic Characteristics – Permeance coefficient - Principle of operation – Types – Magnetic circuit analysis – EMF and torque equations –Commutation - Power controllers – Motor characteristics and control.

5. PERMANENT MAGNET SYNCHRONOUS MOTORS   **9**

Principle of operation – Ideal PMSM – EMF and Torque equations – Armature reaction MMF – Synchronous Reactance – Sinewave motor with practical windings - Phasor diagram – Torque/speed characteristics - Power controllers - Converter Volt-ampere requirements.

CS609 OPERATING SYSTEMS   **3 0 0 3**

Aim: To learn the various aspects of operating systems such as process management, memory management, file systems, and I/O management

UNIT I PROCESSES AND THREADS   **9**
Introduction to operating systems – review of computer organization – operating system structures – system calls – system programs – system structure – virtual machines. Processes: Process concept – Process scheduling – Operations on processes – Cooperating processes – Interprocess communication – Communication in client-server systems. Case study: IPC in Linux. Threads: Multi-threading models – Threading issues. Case Study: Pthreads library

UNIT II PROCESS SCHEDULING AND SYNCHRONIZATION   **10**
CPU Scheduling: Scheduling criteria – Scheduling algorithms – Multiple-processor scheduling – Real time scheduling – Algorithm Evaluation. Case study: Process scheduling in Linux. Process Synchronization: The critical-section problem – Synchronization hardware – Semaphores – Classic problems of synchronization – critical regions – Monitors. Deadlock: System model – Deadlock characterization – Methods for handling deadlocks – Deadlock prevention – Deadlock avoidance – Deadlock detection – Recovery from deadlock.

UNIT III STORAGE MANAGEMENT   **9**
Memory Management: Background – Swapping – Contiguous memory allocation – Paging – Segmentation – Segmentation with paging. Virtual Memory:Background – Demand paging – Process creation – Page replacement –Allocation of frames – Thrashing. Case Study: Memory management in Linux

UNIT IV FILE SYSTEMS   **9**
File-System Interface: File concept – Access methods – Directory structure –File-system mounting – Protection. File-System Implementation : Directory implementation – Allocation methods – Free-space management – efficiency and performance – recovery – log-structured file systems. Case studies: File system in Linux – file system in Windows XP

UNIT V I/O SYSTEMS   **8**
I/O Systems – I/O Hardware – Application I/O interface – kernel I/O subsystem – streams – performance. Mass-Storage Structure: Disk scheduling – Disk management – Swap-space management – RAID – disk attachment – stable storage – tertiary storage. Case study: I/O in Linux

L T P C
EE76 POWER SYSTEM SIMULATION LABORATORY   **0 0 3 2**

AIM

To acquire software development skills and experience in the usage of standard packages necessary for analysis and simulation of power system required for its planning, operation and control.

OBJECTIVES

i. To develop simple C programs for the following basic requirements:
   a) Formation of bus admittance and impedance matrices and network solution.
   b) Power flow solution of small systems using simple method, Gauss-Seidel P.F. method.
   c) Unit Commitment and Economic Dispatch.

ii. To acquire experience in the usage of standard packages for the following analysis / simulation / control functions.
   a) Steady-state analysis of large system using NRPF and FDPF methods.
   b) Quasi steady-state (Fault) analysis for balanced and unbalanced faults.
   c) Transient stability simulation of multimachine power system.
   d) Simulation of Load-Frequency Dynamics and control of power system.

1. Computation of Parameters and Modelling of Transmission Lines

2. Formation of Bus Admittance and Impedance Matrices and Solution of Networks.

3. Load Flow Analysis - I : Solution of Load Flow And Related Problems Using Gauss-Seidel Method

4. Load Flow Analysis - II: Solution of Load Flow and Related Problems Using Newton-Raphson and Fast-Decoupled Methods

5. Fault Analysis

6. Transient and Small Signal Stability Analysis: Single-Machine Infinite Bus System

7.   Transient Stability Analysis of Multimachine Power Systems

8.   Electromagnetic Transients in Power Systems

9.   Load – Frequency Dynamics of Single- Area and Two-Area Power Systems

10.   Economic Dispatch in Power Systems.

TOTAL : 45 PERIODS

Detailed Syllabus

**1.   COMPUTATION OF PARAMETERS AND MODELLING OF TRANSMISSION
       LINES**

Aim

(i)   To determine the positive sequence line parameters L and C per phase per
       kilometer of a three phase single and double circuit transmission lines for
       different conductor arrangements.

(ii)   To understand modelling and performance of short, medium and long lines.
Exercises

Computation of series inductance and shunt capacitance per phase per km of a
three phase line with flat horizontal spacing for single stranded and bundle
conductor configuration.

Computation of series inductance and shunt capacitance per phase per km of a
three phase double circuit transmission line with vertical conductor arrangement
with bundle conductor.

Computation of voltage, current, power factor, regulation and efficiency at the
receiving end of a three phase Transmission line when the voltage and power at
the sending end are given. Use Π model.

Computation of receiving end voltage of a long transmission for a given sending
end voltage and when the line is open circuited at receiving. Also compute the
shunt reactor compensation to limit the no load receiving end voltage to specified
value.

Determination of the voltage profile along the long transmission line for the
following cases of loading at receiving end (i) no load (ii) rated load (iii) surge
impedance loading and (iv) receiving end short circuited.

**2.   FORMATION OF BUS ADMITTANCE AND IMPEDANCE MATRICES AND
       SOLUTION OF NETWORKS**
Aim

To understand the formation of network matrices, the bus admittance matrix **Y** and the bus impedance matrix **Z** of a power network, to effect certain required changes on these matrices and to obtain network solution using these matrices.

Exercises

2.1 Write a program in C language for formation of bus admittance matrix **Y** of a power network using the "Two-Rule Method", given the data pertaining to the transmission lines, transformers and shunt elements. Run the program for a sample 6 bus system and compare the results with that obtained using a standard software.

2.2 Modify the program developed in 2.1 for the following:

(i) To obtain modified **Y** matrix for the outage of a transmission line, a Transformer and a shunt element.

(ii) To obtain network solution **V** given the current injection vector **I**

(iii) To obtain full **Z** matrix or certain specified columns of **Z** matrix.

Verify the correctness of the modified program using 6 bus sample system

* 2.3 Write a program in C language for forming bus impedance matrix **Z** using the "Building Algorithm".

* Optional (not mandatory)

EXPERIMENT 3

LOAD FLOW ANALYSIS - I : SOLUTION OF LOAD FLOW AND RELATED PROBLEMS USING GAUSS-SEIDEL METHOD

Aim

(i) To understand, the basic aspects of steady state analysis of power systems that are required for effective planning and operation of power systems.

(ii) To understand, in particular, the mathematical formulation of load flow model in complex form and a simple method of solving load flow problems of small sized system using Gauss-Seidel iterative algorithm

Exercises

3.1 Write a program in c language for iteratively solving load flow equations using Gauss-Seidel method with provision for acceleration factor and for dealing with P-V buses. Run the program for a sample 6 bus system (Base case) and compare the results with that obtained using a standard software.

3.2 Solve the "Base case" in 3.1 for different values of acceleration factor, draw the convergence characteristics "Iteration taken for convergence versus acceleration factor" and determine the best acceleration factor for the system under study.

3.3 Solve the "Base Case" in 3.1 for the following changed conditions and comment on the results obtained, namely voltage magnitude of the load buses and transmission losses:

(i)   Dropping all shunt capacitors connected to network
(ii)   Changing the voltage setting of generators V_{gi} over the range 1.00 to 1.05
(iii)   Changing the tap setting of the transformers, a_i, over the range 0.85 to 1.1

3.4 Resolve the base case in 3.1 after shifting generation from one generator bus to another generator bus and comment on the MW loading of lines and transformers.

4. LOAD FLOW ANALYSIS – I: SOLUTION OF LOAD FLOW AND RELATED PROBLEMS USING NEWTON-RAPHSON AND FAST DECOUPLED METHODS

Aim

(i)   To understand the following for medium and large scale power systems:

(a) Mathematical formulation of the load flow problem in real variable form
(b) Newton-Raphson method of load flow (NRLF) solution
(c) Fast Decoupled method of load flow (FDLF) solution

(ii)   To become proficient in the usage of software for practical problem solving in the areas of power system planning and operation.

(iii)   To become proficient in the usage of the software in solving problems using Newton-Raphson and Fast Decoupled load flow methods.

Exercises

4.1 Solve the load flow problem (Base case) of a sample 6 bus system using Gauss-Seidel, Fast Decoupled and Newton-Raphson Load Flow programs for a mismatch convergence tolerance of 0.01 MW, plot the convergence characteristics and compare the convergence rate of the three methods.

4.2 Obtain an optimal (minimum transmission loss) load flow solution for the Base case loading of 6 bus sample system by trial and error approach through repeated load flow solutions using Fast Decoupled Load Flow package for different combinations of generator voltage settings, transformer tap settings, and reactive power of shunt elements.

4.3 Carry out contingency analysis on the optimal state obtained in 4.2 for outage of a transmission line using FDLF or NRLF package.

4.4 Obtain load flow solutions using FDLF or NRLF package on the optimal state obtained in 4.2 but with reduced power factor (increased Q load) load and comment on the system voltage profile and transmission loss.

4.5 Determine the maximum loadability of a 2 bus system using analytical solution as well as numerical solution using FDLF package. Draw the P-V curve of the system.

4.6 For the base case operating state of the 6 bus system in 4.1 draw the P-V curve for the weakest load bus. Also obtain the voltage Stability Margin (MW Index) at different operating states of the system.

4.7 For the optimal operating state of 6 bus system obtained in 4.2 determine the Available Transfer Capability (ATC) between a given "source bus" and a given "s

5. FAULT ANALYSIS

Aim

To become familiar with modelling and analysis of power systems under faulted condition and to compute the fault level, post-fault voltages and currents for different types of faults, both symmetric and unsymmetric.

Exercises

5.1 Calculate the fault current, post fault voltage and fault current through the branches for a three phase to ground fault in a small power system and also study the effect of neighbouring system. Check the results using available software.

5.2 Obtain the fault current, fault MVA, Post-fault bus voltages and fault current distribution for single line to ground fault, line-to-line fault and double line to ground fault for a small power system, using the available software. Also check the fault current and fault MVA by hand calculation.

5.3 Carryout fault analysis for a sample power system for LLLG, LG, LL and LLG faults and prepare the report.

6. TRANSIENT AND SMALL-SIGNAL STABILITY ANALYSIS: SINGLE MACHINE-INFINITE BUS SYSTEM

Aim

To become familiar with various aspects of the transient and small signal stability analysis of Single-Machine Infinite Bus (SMIB) system.

Exercises

For a typical power system comprising a generating, step-up transformer, double-circuit transmission line connected to infinite bus:

Transient Stability Analysis

6.1 Hand calculation of the initial conditions necessary for the classical model of the synchronous machine.

6.2 Hand computation of critical clearing angle and time for the fault using equal area criterion.

6.3 Simulation of typical disturbance sequence: fault application, fault clearance by opening of one circuit using the software available and checking stability by plotting the swing curve.

6.4 Determination of critical clearing angle and time for the above fault sequence through trial and error method using the software and checking with the hand computed value.

6.5   Repetition of the above for different fault locations and assessing the fault severity with respect to the location of fault

6.6   Determination of the steady-state and transient stability margins.

Small-signal Stability Analysis:

6.7   Familiarity with linearised swing equation and characteristic equation and its roots, damped frequency of oscillation in Hz, damping ratio and undamped natural frequency.

6.8   Force-free time response for an initial condition using the available software.

6.9   Effect of positive, negative and zero damping.

7. TRANSIENT STABILITY ANALYSIS OF MULTIMACHINE POWER SYSTEMS

Aim

To become familiar with modelling aspects of synchronous machines and network, state-of-the-art algorithm for simplified transient stability simulation, system behaviour when subjected to large disturbances in the presence of synchronous machine controllers and to become proficient in the usage of the software to tackle real life problems encountered in the areas of power system planning and operation.

Exercises

For typical multi-machine power system:

7.1   Simulation of typical disturbance sequence: fault application, fault clearance by opening of a line using the software available and assessing stability with and without controllers.

7.2   Determination of critical clearing angle and time for the above fault sequence through trial and error method using the software.

7.3   Determination of transient stability margins.

7.4   Simulation of full load rejection with and without governor.

7.5   Simulation of loss of generation with and without governor.

7.6   Simulation of loss of excitation (optional).

7.7   Simulation of under frequency load shedding scheme (optional).

8. ELECTROMAGNETIC TRANSIENTS IN POWER SYSTEMS

Aim

To study and understand the electromagnetic transient phenomena in power systems caused due to switching and faults by using Electromagnetic Transients Program (EMTP) and to become proficient in the usage of EMTP to address problems in the areas of over voltage protection and mitigation and insulation coordination of EHV systems.

Exercises

Using the EMTP software or equivalent

Simulation of single-phase energisation of the load through single-phase pi-model of a transmission line and understanding the effect of source inductance.

8.1   Simulation of three-phase energisation of the load through three-phase pi-model of a transmission line and understanding the effect of pole discrepancy of a circuit breaker.

8.2   Simulation of energisation of an open-ended single-phase distributed parameter transmission line and understanding the travelling wave effects.

8.3   Simulation of a three-phase load energisation through a three-phase distributed parameter line with simultaneous and asynchronous closing of circuit breaker and studying the effects.

8.4   Study of transients due to single line-to-ground fault.

8.5   Computation of transient recovery voltage.

9. LOAD-FREQUENCY DYNAMICS OF SINGLE-AREA AND TWO-AREA POWER SYSTEMS

Aim

To become familiar with the modelling and analysis of load-frequency and tie-line flow dynamics of a power system with load-frequency controller (LFC) under different control modes and to design improved controllers to obtain the best system response.

Exercises

9.1 Given the data for a Single-Area power system, simulate the load-frequency dynamics (only governor control) of this area for a step load disturbance of small magnitude, plot the time response of frequency deviation and the corresponding change in turbine power. Check the value of steady state frequency deviation obtained from simulation with that obtained by hand calculation.

9.2 Carry out the simulation of load-frequency dynamics of the Single-Area power system in 9.1 with Load-frequency controller (Integral controller) for different values of K_I (gain of the controller) and choose the best value of K_I to give an "optimal" response with regard to peak over shoot, settling time, steady-state error and Mean-Sum-Squared-Error.

9.3 Given the data for a two-area (identical areas) power system, simulate the load-frequency dynamics (only governor control) of this system for a step load disturbance in one area and plot time response of frequency deviation, turbine power deviation and tie-line power deviation. Compare the steady-state frequency deviation obtained with that obtained in the case of single-area system.

9.4 Carry out the simulation of load-frequency dynamics of two-area system in 9.3 for the following control modes:

(i)   Flat tie-line control
(ii)   Flat frequency control
(iii)   Frequency bias tie-line control

and for the frequency bias Tie-line control mode, determine the optimal values of gain and frequency bias factor required to get the "best" time response.

9.5 Given the data for a two-area (unequal areas) power system, determine the best controller parameters; gains and bias factors to give an optimal response for frequency deviation and tie-line deviations with regard to peak overshoot, settling time, steady-state error and   Mean-Sum-Squared-Error.

10.   ECONOMIC DISPATCH IN POWER SYSTEMS

Aim

(i) To understand the basics of the problem of Economic Dispatch (ED) of optimally adjusting the generation schedules of thermal generating units to meet the system load which are required for unit commitment and economic operation of power systems.

(ii) To understand the development of coordination equations (the mathematical model for ED) without and with losses and operating constraints and solution of these equations using direct and iterative methods

Exercises

10.1.   Write a program in 'C' language to solve economic dispatch problem of a power system with only thermal units. Take production cost function as quadratic and neglect transmission loss.

10.2.   Write a program in 'C' language to solve economic dispatch problem of a power system. Take production cost as quadratic and include transmission loss using loss co-efficient. Use λ-iteration algorithm for solving the co-ordination equations.

10.3.   Determine using the program developed in exercise 10.1 the economic generation schedule of each unit and incremental cost of received power for a sample power system, for a given load cycle.

10.4.   Determine using the program developed in exercise 10.2 the economic generation schedule of each unit, incremental cost of received power and transmission loss for a sample system, for the given load levels.

10.5.   Apply the software module developed in 10.1 to obtain an optimum unit commitment schedule for a few load levels.

REQUIREMENT FOR A BATCH OF 30 STUDENTS

S.No.	Description of Equipment	Quantity required

1.	Personal computers (Pentium-IV, 80GB, 512 MBRAM)	25
2.	Printer laser	1
3.	Dotmatrix	1
4.	Server (Pentium IV, 80GB, 1GBRAM) (High Speed Processor)	1
5.	Software: E.M.T.P/ETAP/CYME/MIPOWER /any power system simulation software	5 licenses
6.	Compliers: C, C++, VB, VC++	25 users

EE 77   COMPREHENSION   **L T P C**
                                                                                      0 0 2 1

AIM:

To encourage the students to comprehend the knowledge acquired from the first

Semester to Sixth Semester of B.E Degree Course through periodic exercise.

EE81   ELECTRIC ENERGY GENERATION AND UTILISATION AND   L T P C
**   CONSERVATION   3 0 0 3**

AIM
To expose students to the main aspects of generation, utilization and conservation.

OBJECTIVES
To impart knowledge on
i.   Generation of electrical power by conventional and non–conventional methods.
ii.   Electrical energy conservation, energy auditing and power quality.
iii. Principle and design of illumination systems and methods of heating and welding.
iv.   Electric traction systems and their performance.
v.   Industrial applications of electric drives.

1.   POWER GENERATION   9
Review of conventional methods – thermal, hydro and nuclear based power generation.   Non-conventional methods of power generation – fuel cells - tidal waves – wind – geothermal – solar - bio-mass - municipal waste. Cogeneration. Effect of distributed generation on power system operation.

2.   ECONOMIC ASPECTS OF GENERATION   9
Economic aspects of power generation – load and load duration curves – number and size of units – cost of electrical energy – tariff. Economics of power factor improvement – power capacitors – power quality.

Importance of electrical energy conservation – methods – energy efficient equipments. Introduction to energy auditing.

3.   ILLUMINATION   9
Importance of lighting – properties of good lighting scheme – laws of illumination – photometry - types of lamps – lighting calculations – basic design of illumination schemes for residential, commercial, street lighting, and sports ground - energy efficiency lamps.

4.   INDUSTRIAL HEATING AND WELDING   9
Role electric heating for industrial applications – resistance heating – induction heating – dielectric heating - electric arc furnaces.
Brief introduction to electric welding – welding generator, welding transformer and the characteristics.

5.   ELECTRIC TRACTION   9
Merits of electric traction – requirements of electric traction system – supply systems – mechanics of train movement – traction motors and control – braking – recent trends in electric traction.

**   L T P C**
EI74 FIBRE OPTICS AND LASER INSTRUMENTS   3 0 0 3

AIM
        To contribute to the knowledge of Fibre optics and Laser Instrumentation and its Industrial and Medical Application.

OBJECTIVES
        i.   To expose the students to the basic concepts of optical fibres and their properties.

ii. To provide adequate knowledge about the Industrial applications of optical fibres.
iii. To expose the students to the Laser fundamentals.
iv. To provide adequate knowledge about Industrial application of lasers.
v. To provide adequate knowledge about holography and Medical applications of Lasers.

1. OPTICAL FIBRES AND THEIR PROPERTIES   9
Principles of light propagation through a fibre - Different types of fibres and their properties, fibre characteristics – Absorption losses – Scattering losses – Dispersion – Connectors and splicers – Fibre termination – Optical sources – Optical detectors.

2. INDUSTRIAL APPLICATION OF OPTICAL FIBRES   9
Fibre optic sensors – Fibre optic instrumentation system – Different types of modulators – Interferometric method of measurement of length – Moire fringes – Measurement of pressure, temperature, current, voltage, liquid level and strain.

3. LASER FUNDAMENTALS   9
Fundamental characteristics of lasers – Three level and four level lasers – Properties of laser – Laser modes – Resonator configuration – Q-switching and mode locking – Cavity damping – Types of lasers – Gas lasers, solid lasers, liquid lasers, semiconductor lasers.

4. INDUSTRIAL APPLICATION OF LASERS   9
Laser for measurement of distance, length, velocity, acceleration, current, voltage and Atmospheric effect – Material processing – Laser heating, welding, melting and trimming of material – Removal and vaporization.

5. HOLOGRAM AND MEDICAL APPLICATIONS   9
Holography – Basic principle - Methods – Holographic interferometry and application, Holography for non-destructive testing – Holographic components – Medical applications of lasers, laser and tissue interactive – Laser instruments for surgery, removal of tumors of vocal cards, brain surgery, plastic surgery, gynaecology and oncology.

4. Monte Ross, 'Laser Applications', McGraw Hill, 1968

AIM

To study the principles and techniques of windows programming using MFC, procedures, resources, controls and database programming through the visual languages, Visual C++ and Visual Basic.

OBJECTIVES

i. To study about the concepts of windows programming models, MFC applications, drawing with the GDI, getting inputs from Mouse and the Keyboard.

ii. To study the concepts of Menu basics, menu magic and classic controls of the windows programming using VC++.

iii. To study the concept of Document/View Architecture with single & multiple document interface, toolbars, status bars and File I/O Serialization.

iv. To study about the integrated development programming event driven programming, variables, constants, procedures and basic ActiveX controls in visual basic.

v. To understand the database and the database management system, visual data manager, data bound controls and ADO controls in VB.

1. **FUNDAMENTALS OF WINDOWS AND MFC**   **9**

Messages - Windows programming - SDK style - Hungarian notation and windows data types - SDK programming in perspective.The benefits of C++ and MFC - MFC design philosophy - Document/View architecture - MFC class hierarchy - AFX functions. Application object - Frame window object - Message map.
Drawing the lines – Curves – Ellipse – Polygons and other shapes. GDI pens – Brushes - GDI fonts - Deleting GDI objects and deselecting GDI objects. Getting input from the mouse: Client & Non-client - Area mouse messages - Mouse wheel - Cursor. Getting input from the keyboard: Input focus - Keystroke messages - Virtual key codes - Character & dead key messages.

2. **RESOURCES AND CONTROLS**   **9**
Creating a menu – Loading and displaying a menu – Responding to menu commands – Command ranges - Updating the items in menu, update ranges – Keyboard accelerators. Creating menus programmatically - Modifying menus programmatically - The system menu - Owner draw menus – Cascading menus - Context menus.

The C button class – C list box class – C static class - The font view application – C edit class – C combo box class – C scrollbar class. Model dialog boxes – Modeless dialog boxes.

3. **DOCUMENT / VIEW ARCHITECTURE**   **9**
The inexistence function revisited – Document object – View object – Frame window object – Dynamic object creation. SDI document template - Command routing. Synchronizing multiple views of a document – Mid squares application –

Supporting multiple document types – Alternatives to MDI. Splitter Windows: Dynamic splitter window – Static splitter windows.

Creating & initializing a toolbar - Controlling the toolbar's visibility – Creating & initializing a status bar - Creating custom status bar panes – Status bar support in appwizard. Opening, closing and creating the files - Reading & Writing – C file derivatives – Serialization basics - Writing serializable classes.

4.   FUNDAMENTALS OF VISUAL BASIC   10

Menu bar – Tool bar – Project explorer – Toolbox – Properties window – Form designer – Form layout – Intermediate window. Designing the user interface: Aligning the controls – Running the application – Visual development and event driven programming.

Variables: Declaration – Types – Converting variable types – User defined data types - Lifetime of a variable. Constants - Arrays – Types of arrays. Procedures: Subroutines – Functions – Calling procedures. Text box controls – List box & Combo box controls – Scroll bar and slider controls – File controls.

5.   DATABASE PROGRAMMING WITH VB   8

Record sets – Data control – Data control properties, methods. Visual data manager: Specifying indices with the visual data manager – Entering data with the visual data manager. Data bound list control – Data bound combo box – Data bound grid control. Mapping databases: Database object – Table def object, Query def object.
Programming the active database objects – ADO object model – Establishing a connection - Executing SQL statements – Cursor types and locking mechanism – Manipulating the record set object – Simple record editing and updating.

L T P C
IC61   ADVANCED CONTROL SYSTEM   3 0 0 3

AIM
        To gain knowledge in state variable analysis, non-linear systems and optimal control.

OBJECTIVES

i	To study the state variable analysis
ii	To provide adequate knowledge in the phase plane analysis.
iii	To give a basic knowledge in describing function analysis.
iv	To analyze the stability of the systems using different techniques.
v	To study the design of optimal controller.

1. STATE VARIABLE ANALYSIS 9

Concept of state – State Variable and State Model – State models for linear and continuous time systems – Solution of state and output equation – controllability and observability - Pole Placement – State observer Design of Control Systems with observers.

2. PHASE PLANE ANALYSIS 9

Features of linear and non-linear systems - Common physical non-linearities – Methods of linearising non-linear systems - Concept of phase portraits – Singular points – Limit cycles – Construction of phase portraits – Phase plane analysis of linear and non-linear systems – Isocline method.

3. DESCRIBING FUNCTION ANALYSIS 9

Basic concepts, derivation of describing functions for common non-linearities – Describing function analysis of non-linear systems – Conditions for stability – Stability of oscillations.

4. STABILITY ANALYSIS 9

Introduction – Liapunov's stability concept – Liapunov's direct method – Lure's transformation – Aizerman's and Kalman's conjecture – Popov's criterion – Circle criterion.

5. OPTIMAL CONTROL 9

Introduction -Decoupling - Time varying optimal control – LQR steady state optimal control – Optimal estimation – Multivariable control design.

EE603 ROBOTICS AND AUTOMATION

<div align="right">

L T P C
3 0 0 3
</div>

AIM

To provide comprehensive knowledge of robotics in the design, analysis and control point of view.

OBJECTIVES

i.   To study the various parts of robots and fields of robotics.
ii. To study the various kinematics and inverse kinematics of robots.
iii. To study the Euler, Lagrangian formulation of Robot dynamics.
iv. To study the trajectory planning for robot.
v.   To study the control of robots for some specific applications.

1. BASIC CONCEPTS   **9**

Definition and origin of robotics – different types of robotics – various generations of robots – degrees of freedom – Asimov's laws of robotics – dynamic stabilization of robots.

2. POWER SOURCES AND SENSORS

9

Hydraulic, pneumatic and electric drives – determination of HP of motor and gearing ratio – variable speed arrangements – path determination – micro machines in robotics – machine vision – ranging – laser – acoustic – magnetic, fiber optic and tactile sensors.

3. MANIPULATORS, ACTUATORS AND GRIPPERS   **9**

Construction of manipulators – manipulator dynamics and force control – electronic and pneumatic manipulator control circuits – end effectors – U various types of grippers – design considerations.

4. KINEMATICS AND PATH PLANNING   **9**

Solution of inverse kinematics problem – multiple solution jacobian work envelop – hill climbing techniques – robot programming languages

5. CASE STUDIES   **9**

Mutiple robots – machine interface – robots in manufacturing and non- manufacturing applications – robot cell design – selection of robot.

EE604 POWER SYSTEM TRANSIENTS   3 0 0 3

AIM

To review the over voltages (or) surges due to the phenomena of switching operations and lighting discharge. Also to study propagation, reflection and refraction of these surges on the equipments their impact on the power system grid.

OBJECTIVES

i.   To study the generation of switching transients and their control using circuit – theoretical concept.
ii. To study the mechanism of lighting strokes and the production of lighting surges.
iii. To study the propagation, reflection and refraction of travelling waves.
iv. To study the impact of voltage transients caused by faults, circuit breaker action, load rejection on integrated power system.

1.   INTRODUCTION AND SURVEY   9

Review and importance of the study of transients - causes for transients.
RL circuit transient with sine wave excitation - double frequency transients - basic transforms of the RLC circuit transients.
Different types of power system transients - effect of transients on power systems – role of the study of transients in system planning.

2.   SWITCHING TRANSIENTS   9

Over voltages due to switching transients - resistance switching and the equivalent circuit for interrupting the resistor current - load switching and equivalent circuit - waveforms for transient voltage across the load and the switch - normal and abnormal switching transients. Current suppression - current chopping - effective equivalent circuit. Capacitance switching - effect of source regulation - capacitance switching with a restrike, with multiple restrikes. Illustration for multiple restriking transients - ferro resonance.

3.   LIGHTNING TRANSIENTS   9

Review of the theories in the formation of clouds and charge formation - rate of charging of thunder clouds – mechanism of lightning discharges and characteristics of lightning strokes – model for lightning stroke - factors contributing to good line design - protection using ground wires - tower footing resistance - Interaction between lightning and power system.

4. TRAVELING WAVES ON TRANSMISSION LINE COMPUTATION OF TRANSIENTS   9

Computation of transients - transient response of systems with series and shunt lumped parameters and distributed lines. Traveling wave concept - step response - Bewely's lattice diagram - standing waves and natural frequencies - reflection and refraction of travelling waves.

5. TRANSIENTS IN INTEGRATED POWER SYSTEM 9

The short line and kilometric fault - distribution of voltages in a power system - Line dropping and load rejection - voltage transients on closing and reclosing lines - over voltage induced by faults - switching surges on integrated system Qualitative application of EMTP for transient computation.

L T P C

EI65   BIO–MEDICAL INSTRUMENTATION   **3 0 0 3**

AIM

The course is designed to make the student acquire an adequate knowledge of the physiological systems of the human body and relate them to the parameters that have clinical importance. The fundamental principles of equipment that are actually in use at the present day are introduced.

OBJECTIVES

i. To provide an acquaintance of the physiology of the heart, lung, blood circulation and circulation respiration. Biomedical applications of different transducers used.

ii. To introduce the student to the various sensing and measurement devices of electrical origin. To provide awareness of electrical safety of medical equipments

iii. To provide the latest ideas on devices of non-electrical devices.

iv. To bring out the important and modern methods of imaging techniques.

v. To provide latest knowledge of medical assistance / techniques and therapeutic equipments.

1.   PHYSIOLOGY AND TRANSDUCERS 9

Cell and its structure – Resting and Action Potential – Nervous system: Functional organisation of the nervous system – Structure of nervous system, neurons - synapse –transmitters and neural communication – Cardiovascular system – respiratory system – Basic components of a biomedical system - Transducers – selection criteria – Piezo electric, ultrasonic transducers - Temperature measurements - Fibre optic temperature sensors.

2.   ELECTRO – PHYSIOLOGICAL MEASUREMENTS 9

Electrodes –Limb electrodes –floating electrodes – pregelled disposable electrodes - Micro, needle and surface electrodes – Amplifiers: Preamplifiers, differential amplifiers, chopper amplifiers – Isolation amplifier.
ECG – EEG – EMG – ERG – Lead systems and recording methods – Typical waveforms.

Electrical safety in medical environment: shock hazards – leakage current- Instruments for checking safety parameters of biomedical equipments

3. NON-ELECTRICAL PARAMETER MEASUREMENTS   9
Measurement of blood pressure – Cardiac output – Heart rate – Heart sound – Pulmonary function measurements – spirometer – Photo Plethysmography, Body Plethysmography – Blood Gas analysers : pH of blood –measurement of blood pCO_2, pO_2, finger-tip oxymeter - ESR, GSR measurements .

4. MEDICAL IMAGING   9
Radio graphic and fluoroscopic techniques – Computer tomography – MRI – Ultrasonography – Endoscopy – Thermography – Different types of biotelemetry systems and patient monitoring – Introduction to Biometric systems

5. ASSISTING AND THERAPEUTIC EQUIPMENTS   9
Pacemakers – Defibrillators – Ventilators – Nerve and muscle stimulators – Diathermy – Heart – Lung machine – Audio meters – Dialysers – Lithotripsy

EE702   INTELLIGENT CONTROL   **3 0 0 3**

1. INTRODUCTION   9
Approaches to intelligent control. Architecture for intelligent control. Symbolic reasoning system, rule-based systems, the AI approach. Knowledge representation. Expert systems.

2.ARTIFICIAL NEURAL NETWORKS   9
Concept of Artificial Neural Networks and its basic mathematical model, McCulloch-Pitts neuron model, simple perceptron, Adaline and Madaline, Feed-forward Multilayer Perceptron. Learning and Training the neural network. Data Processing: Scaling, Fourier transformation, principal-component analysis and wavelet transformations. Hopfield network, Self-organizing network and Recurrent network. Neural Network based controller

3. GENETIC ALGORITHM   9
Basic concept of Genetic algorithm and detail algorithmic steps, adjustment of free parameters. Solution of typical control problems using genetic algorithm. Concept on

some other search techniques like tabu search and ant-colony search techniques for solving optimization problems.

4. FUZZY LOGIC SYSTEM 9
Introduction to crisp sets and fuzzy sets, basic fuzzy set operation and approximate reasoning. Introduction to fuzzy logic modeling and control. Fuzzification, inferencing and defuzzification. Fuzzy knowledge and rule bases. Fuzzy modeling and control schemes for nonlinear systems. Self-organizing fuzzy logic control. Fuzzy logic control for nonlinear time-delay system.

5. APPLICATIONS 9
GA application to power system optimisation problem, Case studies: Identification and control of linear and nonlinear dynamic systems using Matlab-Neural Network toolbox. Stability analysis of Neural-Network interconnection systems. Implementation of fuzzy logic controller using Matlab fuzzy-logic toolbox. Stability analysis of fuzzy control systems.

L T P C
EE703   POWER SYSTEM DYNAMICS   3 0 0 3

AIM
To understand the concept of modelling the power system and the components for simulating the transient and dynamic behaviour of power system meant for the stability studies.

OBJECTIVES
i. To review the modeling of synchronous machine, the excitation system and speed-governing controllers.
ii. To study small signal stability analysis of a single-machine infinite bus system with excitation system and power system stabilizer.
iii. To study transient stability simulation of multimachine power system.

1. **INTRODUCTION** 9

Basics of system dynamics – numerical techniques – introduction to software packages to study the responses.

Concept and importance of power system stability in the operation and design - distinction between transient and dynamic stability - complexity of stability problem in large system – necessity for reduced models - stability of interconnected systems.

2. **SYNCHRONOUS MACHINE MODELLING** 9

Synchronous machine - flux linkage equations - Park's transformation - per unit conversion - normalizing the equations - equivalent circuit - current space model - flux linkage state space model. Sub-transient and transient inductances - time constants.

Simplified models (one axis and constant flux linkage) - steady state equations and phasor diagrams.

3. **MACHINE CONTROLLERS** 9

Exciter and voltage regulators - function and types of excitation systems - typical excitation system configuration - block diagram and state space representation of IEEE type 1 excitation system - saturation function - stabilizing circuit.

Function of speed governing systems - block diagram and state space representation of IEEE mechanical hydraulic governor and electrical hydraulic governors for hydro turbines and steam turbines.

4. **TRANSIENT STABILITY** 9

State equation for multimachine system with one axis model and simulation – modelling of multimachine power system with one axis machine model including excitation system and speed governing system and simulation using R-K method of fourth order (Gill's technique) for transient stability analysis - power system stabilizer. For all simulations, the algorithm and flow chart have to be discussed.

5. **DYNAMIC STABILITY** 9

System response to small disturbances - linear model of the unregulated synchronous machine and its modes of oscillation - regulated synchronous machine - distribution of power impact - linearization of the load equation for the one machine problem – simplified linear model - effect of excitation on dynamic stability - approximate system representation - supplementary stabilizing signals - dynamic performance measure - small signal performance measures.

EE801   POWER QUALITY

AIM: To study the various issues affecting power quality, their production, monitoring and suppression.

OBJECTIVES:
i.   To study the production of voltages sags, overvoltages and harmonics and methods of control.
ii. To study various methods of power quality monitoring.

1.   INTRODUCTION TO POWER QUALITY   9
Terms and definitions: Overloading - under voltage - over voltage. Concepts of transients - short duration variations such as interruption - long duration variation such as sustained interruption. Sags and swells - voltage sag - voltage swell - voltage imbalance - voltage fluctuation - power frequency variations. International standards of power quality.   Computer Business Equipment Manufacturers Associations (CBEMA) curve.

2.   VOLTAGE SAGS AND INTERRUPTIONS   9
Sources of sags and interruptions - estimating voltage sag performance. Thevenin's equivalent source - analysis and calculation of various faulted condition. Voltage sag due to induction motor starting. Estimation of the sag severity - mitigation of voltage sags, active series compensators. Static transfer switches and fast transfer switches.

3.   OVERVOLTAGES   9
Sources of over voltages - Capacitor switching – lightning - ferro resonance. Mitigation of voltage swells - surge arresters - low pass filters - power conditioners. Lightning protection – shielding - line arresters - protection of transformers and cables. An introduction to computer analysis tools for transients, PSCAD and EMTP.

4.   HARMONICS   9
Harmonic sources from commercial and industrial loads, locating harmonic sources. Power system response characteristics - Harmonics Vs transients. Effect of harmonics - harmonic distortion - voltage and current distortion - harmonic indices - inter harmonics – resonance. Harmonic distortion evaluation - devices for controlling harmonic distortion - passive and active filters.   IEEE and IEC standards.

5.   POWER QUALITY MONITORING   9
Monitoring considerations - monitoring and diagnostic techniques for various power quality problems - modeling of power quality (harmonics and voltage sag) problems by mathematical simulation tools - power line disturbance analyzer –
quality measurement equipment - harmonic / spectrum analyzer - flicker meters - disturbance analyzer. Applications of expert systems for power quality monitoring.

AIM:
To introduce the Linear Programming methods, Algorithms, LC PM and PERT.

OBJECTIVES:
1. To study various LP methods.
2. To study Algorithms methods.
3. To study case studies using CPM and PERT

1. INTRODUCTION 9
Role of Operations Research - Operations Research Models and techniques. LP model and technique – formulation and graphical Solution – graphical sensitivity Analysis. The Simplex Algorithm – the two phase method – degeneracy – alterative optima – unbounded and/or Infeasible Solution – redundancies.

2. PROBLEM FORMULATION 9
Definitions of the Dual Problem – Primal-dual Relationship – Economic Interpretation of Duality – Dual Simplex Method – Primal Dual Computation – Post Optimal or Sensitivity Analysis – Changes Affecting Feasibility – Changes Affecting Optimality – Revised Simplex Method – LP Packages.

3. ALGORITHMS AND MODELS 9
Definition of Transportation Model – The Transportation Algorithm – Determination of the Starting Solution – Iterative Computations of an Algorithm – The Assignment Model – The Hungarian Method – The Transshipment Model – Inter Programming Problem – Cutting Plane Algorithm.

4.   NETWORK SOLUTIONS   9
Scope of Network Applications – Network Solution – Minimal Spanning Tree Algorithm – Shortest Route Problem – Examples – Shortest Route Algorithm – Maximal Flow Model – Minimal cost Capacitated Flow Problems.

5.   CASE STUDIES USING CPM AND PERT   9
Network Diagram Representation – Critical Path Method – Time Estimates – Crashing – Time Charts – PERT and CPM for Project Scheduling – Resource Planning - Case Studies.

 EI73   VLSI DESIGN

AIM
Tounderstand th basic concepts of VLSI and CMOS design.

OBJECTIVES
- To give clear idea about the basics of VLSI design and its importance.
- To know about the operating principles of MOS transistor.
- To study about construction of NMOS, CMOS and Bi-CMOS based logic gates.
- To understand the functioning of programmable and Reprogrammable devices.

- To learn about the programming of Programmable device using Hardware description Language.

L T P C
3 0 0 3

1.   BASIC MOS TRANSISTOR   9
Enhancement mode & Depletion mode – Fabrication (NMOS, PMOS, CMOS, BiCMOS) Technology – NMOS transistor current equation – second order effects – MOS Transistor Model.

2.   NMOS & CMOS INVERTER AND GATES   9
NMOS & CMOS inverter – Determination of pull up / pull down ratios – stick diagram – lambda based rules – super buffers – BiCMOS & steering logic.

3.   SUB SYSTEM DESIGN & LAYOUT   9
Structured design of combinational circuits – Dynamic CMOS & clocking – Tally circuits – (NAND-NAND, NOR-NOR and AOI logic) – EXOR structure – Multiplexer structures – Barrel shifter, high speed adder and multiplier circuits.

4.   DESIGN OF COMBINATIONAL ELEMENTS & REGULAR ARRAYLOGIC   9
NMOS PLA – Programmable Logic Devices - Finite State Machine PLA – Introduction to FPGA, CPLD.

5.   VHDL PROGRAMMING   9
RTL Design – Detructured level Design -combinational logic – Types – Operators – Packages – Sequential circuit – Sub programs – Test benches. (Examples: address, counters, flipflops, FSM, Multiplexers / Demltiplexers).

EE 805 HIGH VOLTAGE DIRECT CURRENT TRANSMISSION   3 0 0 3

AIM

To develop the skills in the area of HVDC power transmission with the analysis of HVDC converters, harmonics and design of filters.

OBJECTIVE

i.   To understand the concept, planning of DC power transmission and comparison with AC power transmission.
i.   To analyze HVDC converters.
ii.   To study about compounding and regulation.
iii.   To analyze harmonics and design of filters.
iv.   To learn about HVDC cables and simulation tools.

1. INTRODUCTION   9

Introduction of DC Power transmission technology – Comparison of AC and DC transmission – Application of DC transmission – Description of DC transmission system – Planning for HVDC transmission – Modern trends in DC transmission.

2. ANALYSIS OF HVDC CONVERTERS   9

Pulse number – Choice of converter configuration – Simplified analysis of Graetz circuit – Converter bridge characteristics – Characteristics of a twelve pulse converter – Detailed analysis of converters.

3. COMPOUNDING AND REGULATIONS   9

General – Required regulation – Inverter compounding – Uncompounded inverter – Rectifier compounding – Transmission characteristics with the rectifier and inverter compounding – Communication link – Current regulation from the inverter side – Transformer tap changing

4. HARMONICS AND FILTERS   9

Introduction – Generation of harmonics – Design of AC filters and DC filters – Interference with neighbouring communication lines.

5. HVDC CABLES AND SIMULATION OF HVDC SYSTEMS   9

Introduction of DC cables – Basic physical phenomenon arising in DC insulation – Practical dielectrics – Dielectric stress consideration – Economics of DC cables compared with AC cables. Introduction to system simulation – Philosophy and tools – HVDC system simulation – Modeling of HVDC systems for digital dynamic simulation.

GE608 FUNDAMENTALS OF NANO TECHNOLOGY

L T P C
3 0 0 3

1. INTRODUCTION

10

Nanoscale Science and Technology- Implications for Physics, Chemistry, Biology and Engineering-Classifications of nanostructured materials- nano particles- quantum dots, nanowires-ultra-thinfilms-multilayered materials. Length Scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic and Thermal properties. Introduction to properties and motivation for study (qualitative only).

2. PREPARATION METHODS   10

Bottom-up Synthesis-Top-down Approach: Precipitation, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phase deposition, MOCVD, Sputtering, Evaporation, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMBE.

3. PATTERNING AND LITHOGRAPHY FOR NANOSCALE DEVICES   5

Introduction to optical/UV electron beam and X-ray Lithography systems and processes, Wet etching, dry (Plasma /reactive ion) etching, Etch resists-dip pen lithography

4. PREPARATION ENVIRONMENTS   10

Clean rooms: specifications and design, air and water purity, requirements for particular processes, Vibration free environments: Services and facilities required. Working practices, sample cleaning, Chemical purification, chemical and biological contamination, Safety issues, flammable and toxic hazards, biohazards.

5. CHARECTERISATION TECHNIQUES   10

X-ray diffraction technique, Scanning Electron Microscopy - environmental techniques, Transmission Electron Microscopy including high-resolution imaging, Surface Analysis techniques- AFM, SPM, STM, SNOM, ESCA, SIMS-Nanoindentation

EE 806	**MICRO ELECTRO MECHANICAL SYSTENS**		**3 0 0 3**

AIM

The aim of this course is to educate the student to understand the fundamentals of Micro Electro Mechanical Systems (MEMS)

OBJECTIVES

At the end of this course the student will be able to
(i) integrate the knowledge of semiconductors and solid mechanics to fabricate MEMS devices.
(ii) understand the rudiments of Microfabrication techniques.
(iii) identify and understand the various sensors and actutators
(iv) different materials used for MEMS
(v) applications of MEMS to disciplines beyond Electrical and Mechanical engineering.

1.   INTRODUCTION   9

Intrinsic Characteristics of MEMS – Energy Domains and Transducers- Sensors and Actuators – Introduction to Microfabrication - Silicon based MEMS processes – New Materials – Review of Electrical and Mechanical concepts in MEMS – Semiconductor devices – Stress and strain analysis – Flexural beam bending- Torsional deflection.

2.   SENSORS AND ACTUATORS-I   9

Electrostatic sensors – Parallel plate capacitors – Applications – Interdigitated Finger capacitor – Comb drive devices – Thermal   Sensing and Actuation – Thermal expansion – Thermal couples – Thermal resistors – Applications – Magnetic Actuators – Micromagnetic components – Case studies of MEMS in magnetic actuators.

3.   SENSORS AND ACTUATORS-II   9

Piezoresistive sensors – Piezoresistive sensor materials - Stress analysis of mechanical elements – Applications to Inertia, Pressure, Tactile and Flow sensors – Piezoelectric sensors and actuators – piezoelectric effects – piezoelectric materials – Applications to Inertia , Acoustic, Tactile and Flow sensors.

4.   MICROMACHINING   9

Silicon Anisotropic Etching – Anisotrophic Wet Etching – Dry Etching of Silicon – Plasma Etching – Deep Reaction Ion Etching (DRIE) – Isotropic Wet Etching – Gas Phase

Etchants – Case studies - Basic surface micromachining processes – Structural and Sacrificial Materials – Acceleration of sacrificial Etch – Striction and Antistriction methods – Assembly of 3D MEMS – Foundry process.

5. POLYMER AND OPTICAL MEMS 9

Polymers in MEMS– Polimide - SU-8 - Liquid Crystal Polymer (LCP) – PDMS – PMMA – Parylene – Fluorocarbon - Application to Acceleration, Pressure, Flow and Tactile sensors- Optical MEMS – Lenses and Mirrors – Actuators for Active Optical MEMS.

L T P C

EE807 SOFTWARE FOR CIRCUIT SIMULATION   **3 0 0 3**

1. **Introduction :**   **9**
   Importance of simulation – General purpose circuit analysis – programs – Method of analysis of power electronic systems – Review of modeling of power electronic components and systems.

2. **Advanced Techniques in Simulation :**   **9**
   Analysis of power electronic systems in a sequential manner coupled and decoupled systems – Various algorithms for computing steady state solution in power electronic systems – Future trends in computer simulation.

3. **PSpice :**   **9**
   Introduction – Pspice overview – DC circuit Analysis –AC circuit analysis – Transient and the time domain – Fourier Series and Harmonic components – An introduction to Pspice devices BJT, FET, MOSFET and is model – Amplifiers and Oscillators – Nor linear Devices.

4. **Matlab**   **9**
   Introduction   - function description – Data types – Tool boxes – Graphical Display: Import and Export of data – Programs for solution of state equations.

5. **Simulink:**   **9**
   Introduction – Graphical user Interface – Selection of objects – Blocks – lines Simulation - Application programs.

EE 808   COMPUTER AIDED DESIGN OF ELECTRICAL APPARATUS   3 0 0 3

AIM

To introduce the basics of Computer Aided Design technology for the design of Electrical Machines.

OBJECTIVE

At the end of this course the student will be able to
a.   Learn the importance of computer aided design method.
b.   Understand the basic electromagnetic field equations and the problem formulation for CAD applications.
c.   Become familiar with Finite Element Method as applicable for Electrical Engineering.
d.   Know the organization of a typical CAD package.
e.   Apply Finite Element Method for the design of different Electrical apparatus.

1.   INTRODUCTION   8

Conventional design procedures – Limitations – Need for field analysis based design – Review of Basic principles of energy conversion – Development of Torque/Force.

2.   MATHEMATICAL FORMULATION OF FIELD PROBLEMS   9

Electromagnetic Field Equations – Magnetic Vector/Scalar potential – Electrical vector /Scalar potential – Stored energy in Electric and Magnetic fields – Capacitance - Inductance- Laplace and Poisson's Equations – Energy functional.

3.   PHILOSOPHY OF FEM   10

Mathematical models – Differential/Integral equations – Finite Difference method – Finite element method – Energy minimization – Variational method- 2D field

problems – Discretisation – Shape functions – Stiffness matrix – Solution techniques.

4. CAD PACKAGES   9

Elements of a CAD System –Pre-processing – Modelling – Meshing – Material properties- Boundary Conditions – Setting up solution – Post processing.

5. DESIGN APPLICATIONS   9

Voltage Stress in Insulators – Capacitance calculation - Design of Solenoid Actuator – Inductance and force calculation – Torque calculation in Switched Reluctance Motor.

L T P C
EE809   FLEXIBLE AC TRANSMISSION SYSTEMS   3 0 0 3

AIM: To enhance the transmission capability of transmission system by shunt and series compensation using static controllers.

OBJECTIVES:
i.   To understand the concept of flexible AC transmission and the associated problems.
ii.   To review the static devices for series and shunt control.
iii. To study the operation of controllers for enhancing the transmission capability.

1. INTRODUCTION   9

The concept of flexible AC transmission - reactive power control in electrical power transmission lines -uncompensated transmission line – series and shunt compensation. Overview of FACTS devices - Static Var Compensator (SVC) – Thyristor Switched Series capacitor (TCSC) – Unified Power Flow controller (UPFC) - Integrated Power Flow Controller (IPFC).

2. STATIC VAR COMPENSATOR (SVC) AND APPLICATIONS   9

Voltage control by SVC – advantages of slope in dynamic characteristics – influence of SVC on system voltage. Applications - enhancement of transient stability – steady state power transfer – enhancement of power system damping – prevention of voltage instability.

3. THYRISTOR CONTROLLED SERIES CAPACITOR(TCSC)AND APPLICATIONS 9

Operation of the TCSC - different modes of operation – modeling of TCSC – variable reactance model – modeling for stability studies. Applications - improvement of the system stability limit – enhancement of system damping – voltage collapse prevention.

4. EMERGING FACTS CONTROLLERS   9

Static Synchronous Compensator (STATCOM) – operating principle – V-I characteristics – Unified Power Flow Controller (UPFC) – Principle of operation - modes of operation – applications – modeling of UPFC for power flow studies.

5. CO-ORDINATION OF FACTS CONTROLLERS   9

FACTs Controller interactions – SVC–SVC interaction - co-ordination of multiple controllers using linear control techniques – Quantitative treatment of control coordination.
